Summary

I'm a recent Computer Science graduate who builds full-stack web and mobile applications. I work primarily with Next.js, React Native, and Node.js. For my final year project, I led backend development on a community crowdsourcing platform, and I've also built e-commerce web applications and AI-powered exam prep tools. I care most about building practical software that actually works. I adapt quickly to new stacks and excel in team environments through clear and effective communication.

Experience

Community Issue Crowdsourcing Platform, Backend Engineer & Project Manager

- Led backend development and managed the project lifecycle from ideation to delivery for final year university project.
- Built a robust platform allowing community members to report local issues, implemented with scalable API endpoints.

Shoe Store Web App, Full Stack Developer

- Developed a digital catalog and seamless ordering web application backed by Supabase for a local shoe store.

AI-Powered Exit Exam Tool, Developer

- Created an application that allows users to add questions and receive detailed explanations powered by an AI API.

Personal Portfolio Website, Frontend Developer

- Built a modern, responsive portfolio website using Next.js to showcase projects, skills, and professional experience.

CAWEE, Addis Ababa, Data Encoder (Volunteer)

- Volunteered for 1.5 months to manage data entry, ensure data integrity, and maintain digital records.

Education

BS. Unity University, Computer Science

Sept 2022 – Apr 2026
